

# What's Yours, What's Ours

Who's Responsible for Your Electric and Gas Service

**Rhode Island Energy™**

a PPL company

## The Facts about Your Energy Service Equipment

Our customers sometimes ask who is responsible for maintaining and repairing the equipment that provides electricity and/or natural gas to their homes. Most people pay their telephone company only for service to their home, and don't choose to pay the additional fee for maintaining the phone and lines inside the home. In the same way, you pay Rhode Island Energy for providing service to your meter, not for maintaining the equipment or appliances using the service. The customer/owner is responsible for installing, maintaining and repairing all equipment beyond the service connection point except for the electric meter.

### Overhead Electric Service Entrance Cable

If you receive overhead electric service, your electric system consists of the following:

1. Electric lines that run from the utility pole to your residence. The only equipment that is maintained or owned by Rhode Island Energy beyond this connection point is the electric meter.
2. Weatherhead and insulator at the point where electric lines connect to your residence.
3. Service entrance cable, the wire that runs from the weatherhead to the electric meter and from the electric meter to the service panel in your home.
4. Meter box on which your electric meter is mounted.
5. Electric meter which measures your use of electricity in kilowatt-hours.
6. Main service panel which includes the fuse boxes and/or circuit breakers for the electric service in your home.

### Who is responsible for what?

If you have overhead electrical service, you are responsible for the maintenance and repair of the following:

- Weatherhead and insulator
- Service entrance cable
- Meter box
- Main service panel

### Rhode Island Energy is responsible for repairs to:

- Overhead, outside electric lines to your residence
- Electric meter

a PPL company

## Underground Electric Service

If you receive electric service from an underground cable that runs from a Rhode Island Energy utility pole or transformer to your residence, the electric system consists of the following:

- A. Underground service entrance cable, which runs underground from Rhode Island Energy's utility pole or transformer to the electric meter and from the meter to the main service panel in your home.**
- B. Meter box on which your electric meter is mounted.**
- C. Electric meter, which measures your use of electricity in kilowatt-hours.**
- D. Main service panel, which includes the fuse boxes and/or circuit breakers that protect the electric service in your residence.**

## Repair and Maintenance of Underground Service

The homeowner is responsible for the maintenance of and any repairs to the following:

- Underground service entrance cable
- Meter box
- Main service panel

In addition to maintaining all parts of its delivery system, including the utility poles and transformers, Rhode Island Energy will repair any problems with the electric meter.

## Tips on Selecting a Contractor

When looking for a professional contractor to maintain, repair or replace your electric or natural gas service equipment, remember:

- Contractors charge different fees. Call at least three to compare price quotes.
- Ask how long each contractor has been in business.
- Get customer references – and check to see if those customers were satisfied.
- Be sure the contractor guarantees both workmanship and materials.
- Make sure the contractor provides a current copy of their liability and workers compensation insurance for your protection.
- Avoid demands for up-front payments.
- Keep in mind that the lowest bid isn't always the best. Skill, workmanship and service are extremely important.
